LUN ID and size on AIX 3

LUN ID and size on AIX

Also works with VIO or VIOS, you need oem_setup_env.

To get a comma separated list of LUN IDs and its size use this command:

```
for i in $(lsdev -Cc disk | awk '{print $1}'); do serial=$(lscfg -vpl $i |  
grep "Serial Number"| awk -F '.' '{print $16}'); size=$(getconf DISK_SIZE  
/dev/$i);echo "$serial,$size" ;done
```
